Primal Strength US: ADA / WCAG 2.2 AA Live Deployment QA

Store: us.primalstrength.com

Live theme: `primal-strength-us/ux-project - Live` (ID `142304510051`)

Deployment date: October 29, 2026

Production status

The approved ADA/WCAG theme changes are live. Shopify completed the scoped deployments without reported errors.

A current pre-deployment backup was created before the live update:

- **Backup theme:** `Backup - Live before ADA WCAG - 2026-10-29 09-59`
- **Backup ID:** `189332914275`

Published files

The production deployment was restricted to these 11 ADA/WCAG files. No unrelated theme files were uploaded or deleted.

1. `layout/theme.liquid`
2. `snippets/accessibility-launcher.liquid`
3. `assets/accessibility-launcher.js`
4. `sections/image-with-text-new.liquid`
5. `sections/faq.liquid`
6. `snippets/component-faq.liquid`
7. `snippets/facets.liquid`
8. `assets/global.css`
9. `assets/main-product.css`
10. `snippets/pagination.liquid`
11. `assets/component-image-with-text.css`

The final stylesheet was deployed immediately after initial live QA identified that the mobile Contact phone and email links were below the required 24px target size. The scoped correction raises those contact-link targets to at least 24px without changing unrelated links.

Integrity verification

After deployment, Shopify theme pulls confirmed that the first 10 published files matched the approved development source byte for byte. The additional Contact stylesheet was pulled and matched after its scoped target-size correction was deployed.

Live QA results

- **Tool:** axe-core 4.10.3
- **Rules:** `wcag2a` , `wcag2aa` , `wcag21a` , `wcag21aa` , `wcag22aa`
- **Viewports:** desktop 1440 x 900 and mobile 390 x 844
- **Public routes:** homepage, New In collection, All collection, two PDPs, cart, search, Contact, and GSA
- **Result:** 18 of 18 public route and viewport checks completed with 0 axe violations.
- **Contact mobile:** phone link measured 124 x 26px and email link measured 124 x 25px after the correction, with 0 axe violations.
- **Accessibility launcher:** right-edge Echelon-aligned placement is live. Its icon and expanded Accessibility label render white on the blue tab on desktop and mobile.
- **Keyboard:** Enter opens the launcher and Escape closes it and restores focus.
- **HappyFox:** its delayed iframe was verified in production with the title `Chat with Primal Strength support` .

Shopify preview chrome and cookie overlays were excluded only in the isolated QA browser session. They were not changed on the storefront.

Intentionally not published

The Shopify page titled `Accessibility Statement` remains an unpublished draft, so `/pages/accessibility-statement` correctly returns 404 publicly. No footer navigation link was added. These are separate Admin and menu actions, not theme-code changes.
